agape

WHERE AGAPE GOES

FROM THE SEAT TO THE MONEY AROUND EVERY EVENT

Food to the seat is how Agape gets in. This paper sets out what that position makes possible, how big each line gets, who has already proved each one, the order of moves, and what could break it.

Prepared for investors · Confidential

November 2026

Agape's real asset is not food delivery. It is the position food delivery puts it in: inside the fan's phone at the moment they are spending, on the money path between fans and every business in and around the venue, and holding the identity that ties one night to the next. Every other line of business in this paper is that position, put to work.

1 THE THESIS

Food to the seat is the wedge because it is the one thing every fan at every event already buys, and the line is the one thing every fan already hates. Solving it earns four things no single competitor holds together:

1. **The moment.** Fans open Agape while they are at the event, attentive and spending. Sponsors and nearby businesses pay most for exactly that moment.
2. **The money path.** Fans pay Agape, and Agape pays the stands, runners and tax. Whoever sits on the money path sees every transaction and can add services to it.
3. **The merchant relationships.** Every stand, venue and nearby business Agape works with becomes a relationship Agape can sell more to: payments, marketing, payouts, data.
4. **The fan identity.** One account, a level and a history that follows the fan to every venue. Teams, artists, sponsors and leagues today each hold a slice of the fan; Agape can hold the whole fan.

Each of these is worth more the more of the others Agape has. That is why the opportunity is a web, not a ladder: every line below draws on several of the four and strengthens several in return.

THE NORTH STAR

30% OF ALL MONEY SPENT AROUND LIVE EVENTS FLOWING THROUGH AGAPE, AND THE BUSINESSES AROUND EVERY VENUE RUNNING THEIR EVERYDAY CARD VOLUME THROUGH AGAPE AS WELL.

2 WHAT EACH MOVE LEAVES BEHIND

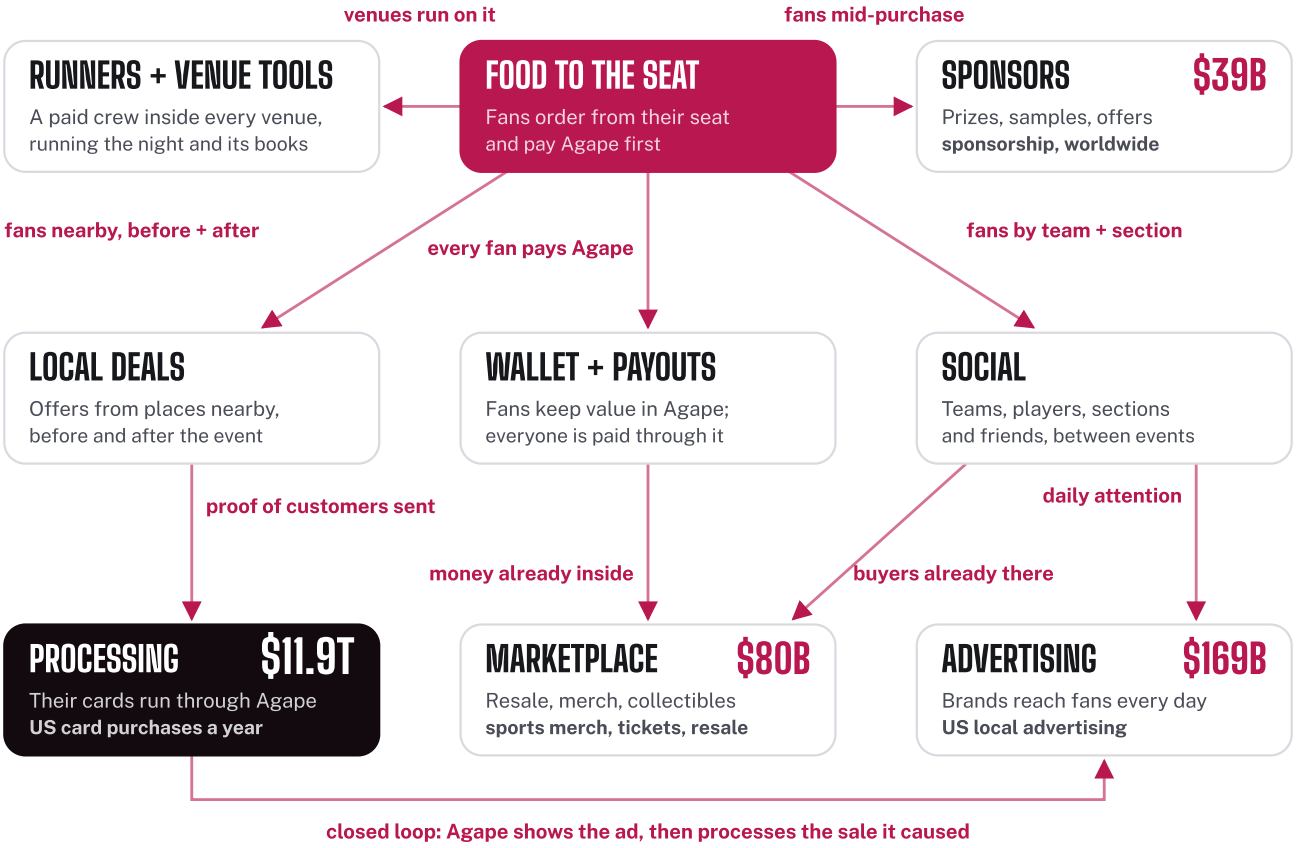

Every move gets judged twice: by what it earns, and by what it leaves Agape holding. The second matters more, because it decides what Agape can do next.

ASSET	WHERE IT COMES FROM	WHY IT COMPOUNDS
The moment	Ordering from the seat	A fan with their phone out, wallet open and a few minutes between plays. Other attention businesses pay to reach people who aren't buying. These fans are already buying.
The money path	Agape as merchant of record	Fans pay Agape first; Agape pays the stands, runners and tax. Whoever holds the money path decides who gets paid, when and on what terms, and never has to chase anyone for a fee.

Proof of customers	The "What Agape brought them" report (built)	A local business sees how many fans Agape sent it and what they spent. That proof turns the next ask, "run your cards through us," into an easy yes.
Merchant relationships	Venues, concessionaires and local businesses set up as payees	Each is already verified, has an account on file and is paid by Agape. Adding a product for a merchant who's already set up costs almost nothing.
Fan identity	Accounts tied to seats, teams and orders	Who the fan is, which team they follow, where they sit, who they came with and what they buy. Social, well-targeted offers and a marketplace with buyers already in it all start here.
Runners	Paying independent runners each night	A trained, paid, rated crew inside every venue. Anything that has to move physically inside a venue can ride on it.
Daily habit	Social and the marketplace	It turns an app fans open on event nights into one they open every day. Advertisers pay for that, and so does every later product.

No one else at a venue holds the first three together. Ticketing companies know who the fan is but not what they spend that night. The concessionaire and its register see the spending but not the fan. Local businesses have neither. The payments side has noticed: Shift4, a card processor, bought VenueNext in 2021 and SpotOn's stadium business for $100M in 2023 to get into venue commerce. The money path at venues is worth paying for. But Shift4 came in through the register. Agape comes in through the fan, and the fan is the one asset a register can't buy.

3 THE WEB

Read it as a web, not a staircase. Food to the seat is the only way in, but once Agape is in the seat, several lines leave it at the same time, and they feed each other.

The local line: food → local deals → processing → advertising. This is the line that turns an events company into a payments company. Fans at the event get offers from bars, restaurants and shops nearby. The "What Agape brought them" report shows each business exactly what that sent it. With that proof in hand, Agape asks for two things a business already pays for: card processing (about 1.6% of every card sale goes to processing fees in the US) and marketing (US local businesses spend about $169B a year on advertising). Processing margin alone is a fraction of a percent; processing bundled with the marketing budget is how "1% of revenue" becomes real. Once Agape both shows a fan the ad and processes the card that pays for the meal, it can prove which ad made which sale, the closed loop advertisers pay the most for.

The money line: food → wallet → marketplace. Every fan who orders once has an account and a way to pay inside Agape. Credits, sponsor points and refunds as balance are already stored value. Every stand, runner and local business is a payee Agape pays out. A marketplace that opens with money and payees already inside skips the hardest part of starting one.

The attention line: food → social → advertising and the marketplace. Fans are already sorted by team, section and the friends they came with. Social keeps them in Agape between events, turning an app fans open on event nights into one they open every day. Daily attention is what advertisers buy; buyers already there are what a marketplace needs.

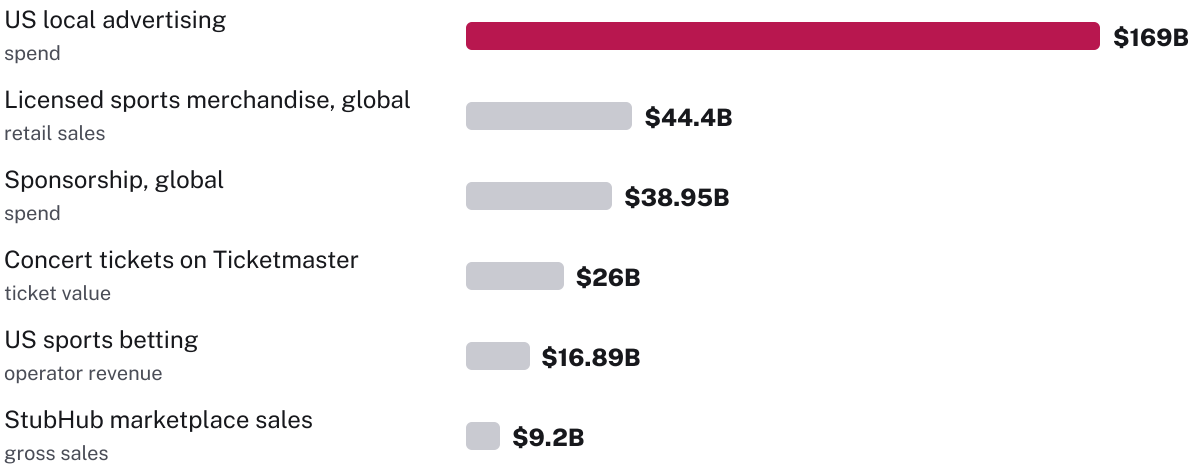

The venue line: runners and venue tools. Payouts, stand alerts, the night's console and its books mean the venue runs its night on Agape, which makes Agape harder to remove than any app a fan could delete. The runner crew is a physical network inside the building: merch drops, seat upgrades and anything else that has to reach a seat can ride on it.

The sponsor line: food → sponsors in the moment. Agape reaches fans mid-purchase, can hand them a sample, a prize or an offer at the seat, then show the sponsor what happened next. That's measured sponsorship rather than a logo on a banner.

Lines the picture leaves out, each real but later: **capital for merchants** (lending against future card sales, repaid from each day's flow; in late 2025, lending was the main driver of Square's gross profit growth), **becoming the processor** once volume makes the partner's margin worth taking back, **travel and away games**, **athletes and creators** selling straight to the fans who follow them, and **new kinds of venue**: college and minor-league sports, festivals, theaters and conventions.

4 HOW BIG EACH LINE GETS

The biggest pool is local, outside the arena. Yearly money in each pool Agape can route, 2025, in billions:

Off this scale: US card purchase volume, **$11.9 trillion** in 2024. Its bar would be 70 times the longest one.

Two kinds of number matter, and they shouldn't be mixed. **Volume** is the money that flows through Agape. **Revenue** is the part Agape keeps. "Trillions" is a volume claim, a real one, but only one line reaches it. The rates below come from companies already doing it; the counts of fans and businesses are assumptions, to show the shape, not to forecast.

LINE	ASSUMPTION	FLOWS THROUGH AGAPE A YEAR	AGAPE KEEPS
Food to the seat	100M fan visits a year on Agape; 25% order; $32 per ordering fan (the Cavaliers' in-seat pilot)	$0.8B	A share of each order, plus delivery fees
Local processing, to start	2,000 businesses near venues doing $20M a year each in card sales	$40B	1% bundled (processing plus marketing): $400M

Local processing, at Toast's scale	50,000 businesses at Toast's average of $1.19M per location	$60B	Processing margin plus marketing
The marketplace	30% of four sourced pools: concert tickets, resale, sports merch and sponsorship ($118.6B together)	$35.6B	At a 10% take (StubHub keeps 19%, DoorDash about 13%): $3.6B
Local processing, the long run	10% of US card purchase volume	$1.19 trillion	A fraction of a percent of each sale, plus marketing

- **Food to the seat makes the door, not the fortune.** Even at 100M visits a year it's under $1B of volume. Its job is to put Agape in the seat, in the money path and in front of local businesses.
- **The marketplace is a tens-of-billions line,** using only the pools there are sources for. Food, parking, travel and sports tickets would make it larger.
- **Local processing is the only line that reaches trillions,** because it isn't limited to event nights. Every business near a venue takes cards every day of the year. The 30% north star on live events is what earns the right to ask those businesses for their volume.

5 WHO ALREADY PROVED EACH LINE

No single company has built Agape's web. Each line has been proven separately by a company that started somewhere narrower:

COMPANY	STARTED AS	BECAME	WHAT IT PROVES FOR AGAPE
Toast	Software for restaurants	A payments company: $195.1B processed in 2025; $5.0B of its $6.2B revenue from payments and financial products	Software gets you in the door; the money path pays. Agape's door is the fan, not the register.
DoorDash	Delivery	A marketplace and ad business: about $102B in orders in 2025, keeping about 13.4%, with 56M monthly users	A delivery network turns into a daily marketplace and an ad business once people are there every day.
Square (Block)	A card reader	A lender: in late 2025, lending drove most of Square's gross profit growth	Whoever processes a business's cards can lend against them, repaid from the sales it processes.
Live Nation / Ticketmaster	Concerts and tickets	346M tickets in 2025, $1.3B a year from sponsorship and ads, $4B of fans' money held before events	Holding fans' money before the event is leverage, and the audience sells to sponsors.
StubHub	Ticket resale	$9.2B of sales in 2025, keeping 19%	A live-event marketplace earns a far higher share than a payment does.
Fanatics	Licensed merchandise	Commerce, trading cards and betting: about $13B in 2025, more than 100M fans on file	One fan identity can carry many products, if fans come back between events.

Shift4	Card processing	Bought its way into stadiums: VenueNext (2021) and SpotOn's venue business ($100M, 2023)	The venue money path is worth buying. A processor gets it through the register; Agape gets it through the fan.

Every company above holds one or two of Agape's assets. None holds the moment, the money path, the proof of customers and the fan's identity at the same time.

6 THE ORDER OF MOVES

The web gets built in phases that overlap: each starts as soon as the one before has left behind what it needs. Each phase ends at a gate, a thing that must be true before the next phase gets serious money or people.

PHASE	WHAT SHIPS	THE GATE TO THE NEXT	WHAT IT LEAVES BEHIND
1. First venues (likely Kentucky)	Food to the seat, payee sign-up and nightly payouts, stand alerts, the venue console. All built.	Fans order again at their next event. The venue wants it every night. The books balance to the cent.	The moment, the money path, the first merchants
2. Sponsors and local deals (same nights)	Sponsored prizes and samples; offers from places nearby; the "What Agape brought them" report (built)	Local businesses see in numbers the customers Agape sent them, and come back for more	Proof of customers
3. Local processing, through a partner	Businesses that saw the report run their cards through Agape on a residual-share deal	Enough merchants stay a year to pay for the local team	Daily, year-round money flowing through Agape
4. Social and the wallet	Follow teams, players, sections and friends; points and balance that work at the venue and at local partners	Fans open Agape between events, every week	The daily habit, money already inside
5. The marketplace	Resale, merch, collectibles, seat upgrades, then tickets wherever contracts allow	Buyers come back when there's no event that day	The biggest share of live-event spending
6. Own the rail	Agape becomes the processor (a payfac); capital for merchants	Volume large enough that running processing beats the partner's residual, with compliance in place	The full margin on every card

Two things keep this from being a wish list. Phases 1 and 2 run on the same nights with the same fans: one launch, not two. And nothing in a later phase is built before its gate is met. A gate that doesn't open is a signal to fix the phase before it, not to skip ahead.

7 WHAT COULD BREAK IT, AND THE DEFENSE

RISK	WHY IT'S REAL	THE DEFENSE
The concessionaire or venue says no	Large food-service companies and venue register systems have their own apps, and Shift4 owns much of the stadium register business.	Agape sells through their stands rather than around them, pays them, and needs nothing installed: new sales on their books, not a competing kitchen.
Ticketing exclusivity	Primary tickets at most venues are locked into long exclusive contracts.	The marketplace starts with resale, merch, collectibles, upgrades and local. Primary tickets only through partnership.
Holding fans' money	Balances and payouts can require money transmitter licenses state by state.	Hold money through the processor's accounts until Agape is licensed. Points have no cash value. Counsel before the wallet launches.
The processing partner	The local line depends on whoever processes.	The payee and payout layer is processor-agnostic. Keep a second processor ready; never let one partner own the merchant relationship.
Runners' status	Contractor rules differ by state and keep changing.	Runners choose their own shifts and trips, paid per delivery plus all tips. Reviewed state by state before each market.
Alcohol	Delivering to a seat is regulated, and venues are liable.	ID checked at handoff, venue limits enforced, the stand can refuse. Already in the product and terms.
Social never catches on	Most social products die empty.	Agape's social isn't empty on day one: fans are already grouped by team, section and the friends they came with.
Doing too much too early	Every line in the web is tempting.	The gates. No phase gets serious money until the one before has opened its gate.

Betting sits next to live events and fan identity, and Fanatics has built a betting business on its fans. For Agape it stays a partnership question at most: heavily regulated, and able to cost the trust of venues, teams and families. It isn't part of the plan.
